

MORE TOOL. MORE CHOICE.
ONE SOURCE.

TOOLS FOR THE WIND INDUSTRY

09

The professional choice

GEDORE is one of the world's leading tool manufacturers. Headquartered in Germany, with US offices in South Carolina, we offer discriminating professionals some of the best tools out there.

Quality

Our tools are trusted the world over. In many fields, experienced professionals know that when you can only take a few tools on a job, take GEDORE.

We've been making tools since 1919, and unlike some brands, we make what we sell. That means we have complete control of every step, from the steel that goes into our forges to the final surface finish.

As a result, our tools don't just meet, they exceed demanding international DIN and ISO standards for performance, precision, and toughness.

People

Our tools don't make themselves. People make them – highly skilled and dedicated people. Building on the legendary German tradition of engineering excellence, our employees create tools they're proud of.

Innovation

We're always looking for ways to make our tools better – even more reliable, even more precise, even more ergonomic. A long list of patents is the proof.

Sustainability

At GEDORE, we've been practicing sustainability for years. We minimize our environmental impact with rigorous materials recycling, water-free grinding, graywater reclamation, chemical reclamation, low-emissions powder coating, and a constant effort to maximize energy efficiency. And of course, the exceptional quality of our tools lets our customers "buy once, and buy well."

MORE TOOL. MORE CHOICE. ONE SOURCE.

More Tool

We produce tools of outstanding quality. They are ergonomic, dimensionally accurate, powerful and efficient, safe and durable. They help you work to your full potential.

More Choice

GEDORE is one of the few manufacturers to offer a complete line of professional tools, in metric and inch sizes, for virtually any application.

One Source

If it says GEDORE, it is GEDORE. We make our tools ourselves, from raw material to finished product. This gives us complete control of production methods, sustainability standards, and quality. Most importantly, it gives you assurance that when you choose GEDORE, you are choosing the best.

GEDORE and the wind industry

When you're at a remote wind site, you have to rely on what you have. You can't just go get a replacement tool – the nearest store may be hours away. And when you're up in a tower, you definitely want tools you can trust.

This is where the extraordinary quality and precision of GEDORE tools comes in. They won't let you down.

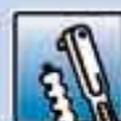

We've been supplying wind tools to the international wind industry for many years. The wind power industry is growing rapidly, and the technology is international. Now, these same tried and true tools are available in the US from our South Carolina location.

GEDORE'S commitment to the renewables industry is growing.

Bringing it all together

Wind turbine installation and maintenance brings it all together:

- Remote locations, where replacement tools are unavailable
- High forces that demand precise tightening torques
- Technology that is expected to work around the clock, unsupervised
- Working in all weathers, high up, and in cramped spaces

All this means your tools have to perform far beyond what other tools ever have to face.

This is the kind of tool we make. GEDORE tools combine the toughness, precision, and ergonomics you need. For example:

- Higher-precision torque wrenches that are also easier to use
- Wrenches that grip bolt head flats instead of the corners
- Matte finishes for a good hold in all conditions
- Pliers and screwdrivers that transfer hand force better, for easier working
- Insulated tools for more safety when working around electricity
- COROSTOP tools for the ultimate resistance to the elements

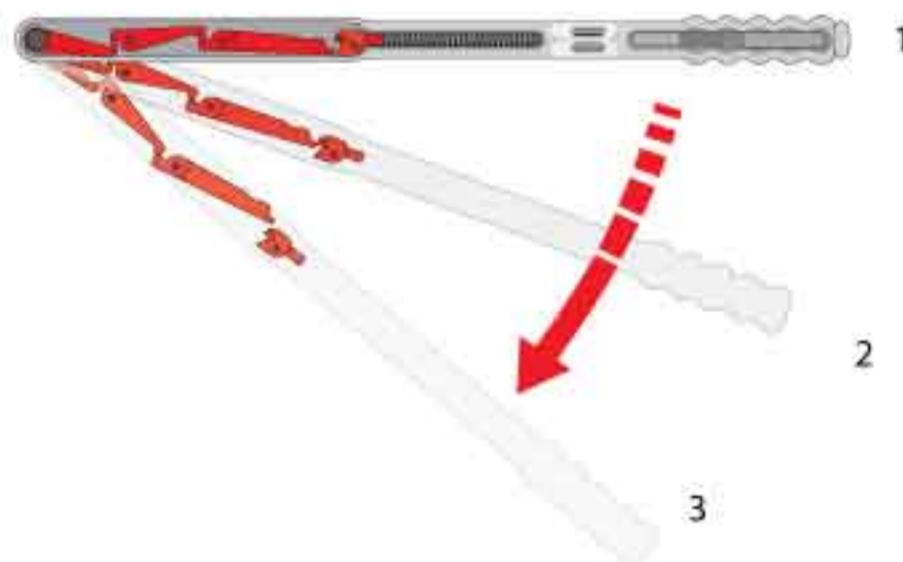

We bring it all together, to give you better tools that do more.

This catalog shows our tools of special interest for the wind industry. Also ask for your copy of our 2009 General Catalog.

Better torque wrenches for better connects

We make all our own parts in our own drop forge. The unique design of the transfer levers gives our torque wrenches their precision and long life.

1. Lever chain at rest (no force applied).
2. Lever chain under force, before reaching the set torque.
3. When set torque is reached the last lever slips past the release lever with a noticeable "click." When released, the lever chain goes back into the starting position.

COROSTOP

Weatherproof

COROSTOP is a special galvanic coating process that makes tools 500% more corrosion-resistant than non-treated tools. It works deep so that even if the tool is a little scratched, the corrosion proofing is unimpaired.

This makes **COROSTOP** tools ideal for exposed outdoor work.

1. **COROSTOP** tool after 10 days in seawater
2. Conventional tool after 10 days in seawater

Tools available in **COROSTOP** version are marked with the NC logo. See our General Catalog for Codes and part Nos.

GEDORE'S award-winning Dremometer torque wrench

Gedore was awarded the 2008 Bussie Long-life Design BLDA Silver Medal for the Dremometer. And no wonder – with just 3% tolerance to the set torque, it's 25% more precise than the industry standard of 4% tolerance.

Each Dremometer comes with a test certificate verifying compliance with the ISO 6789 international standard, matched to the serial number on the tool.

Tighter tolerance

Dremometer torque wrenches tighten to within 3% of the set torque. That means your connections are safer and more durable.

Easy setting

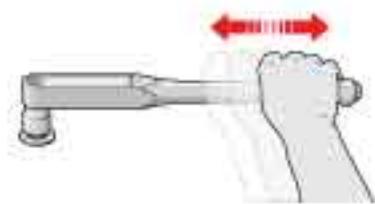

Setting the torque is easy, with a loss-proof hex key in the grip. Torque can be set in N-m or lbf-in/ft as desired.

All Dremometers are also available with safety lock (A+S).

No holds barred

Some torque wrenches make you hold the wrench in a certain place to get the right torque. Not ours – they give correct torque no matter whether you hold at the grip, the middle, with both hands, or even use an extension tube.

Tough on the job, easy on you

The all-aluminum housing makes the Dremometer tough but light. The ergonomic grip gives you a sure hold.

No guessing

When you reach the set torque, the Dremometer lets you know with a click you can hear and feel, and resets automatically.

Built to take it

Dremometers are machined out of a solid aluminum bar, for maximum toughness on the job – any job.

Dual scale

Every Dremometer lets you set torque in Nm or lbf-in/lbf-ft as desired.

Precision all the way

Our extreme build quality assures long life and accuracy even under extended heavy use.

MECHANICAL TORQUE WRENCHES

753

DREMOMETER MINI 2-12 N-m / 18-106 lbf-in

- Working accuracy: +/- 3% tolerance of scale set torque
- Lightweight plastic casing, made from high-grade, glass-fiber reinforced polyamide, with soft-grip handle
- Dual scale with scale graduation of 0.5 N-m and 5 lbf-in
- Micrometer scale graduations of 0.05 N-m
- Window with magnifying-glass effect

8563 - 8568 DR

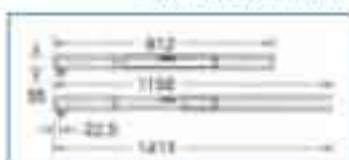

DREMOMETER 140-760 N-m / 100-560 lbf-ft

- Working accuracy: +/- 3% tolerance of scale set torque
- All-metal construction from high-strength aluminum alloy
- With 3/4" single square drive for controlled clockwise tightening (type DR no. 8563) or double square drive for bi-directional tightening (type DRL no. 8568)
- If ordering with pre-set-value locking and safety device (type DR/DRL A+S no. 7563/7568), please specify the N-m value if fixed factory-pre-setting is desired (price on request)

DREMOMETER Z

- The large cross-section of the spigot end transfers a maximum torque. "Quick-fitting-change-system" with locking pin mechanism ensures fast, flexible working. Ideal for bolted connections in cramped and hard-to-access locations. Depending on how the DREMOMETER Z is used, it is possible to work both in the forward direction and also to the side.

8461 - 8471 Z

DREMOMETER WITH QUICK-FITTING CHANGE 8-1000 N-m / 70 lbf-in-730 lbf-ft

- Working accuracy: +/- 3% tolerance of scale set torque
- All-metal construction from high-strength aluminum alloy, type DXZ with aluminum extension tube
- Factory depth gauges: 32 mm (16), 56 mm (22) or 75 mm (28), use type DXZ only with aluminum extension tube
- If ordering with pre-set-value locking and safety device (AZ to DXZ A+S no. 7460-7471), please specify the Nm value if fixed factory-pre-setting is desired (price on request)

- ✔ Avoidance of long levers - meaning that you work more safely
- ✔ Greater accuracy because the torque is applied slowly
- ✔ The specified ratio is the true torque multiplication factor
- ✔ You can manage without correction charts for determining the output torque
- ✔ Models having an anti-wind-up ratchet enable you to work more safely
- ✔ For high-precision torque control, electronic torque transducers are available for all models.

Torque reaction: Sliding reaction "slave" square can be supported on an adjacent screw with an impact nut socket, e.g. in the case of flange screw connections.

1 Action = Reaction: Reaction arm for the absorption of the reaction.

2 Drive: Input square of sizes 3/8", 1/2" and 3/4".

3 Maximum precision: Smoothed tooth flanks, honed drill holes, hardened cylindrical pins and precision bearings ensure that frictional losses in the planet gear are kept negligible. Accuracies of +/- 4% over the entire working range provide the optimum safety when making screw connections.

6 Safety: Torque multipliers starting from a ratio of 1:5 are fitted with anti-wind-up ratchets.

4 Solid and robust: Housing made of quality steel. Also designed for strong forces. The compact construction enables work on hard-to-access screw connections.

5 Flexible: Replaceable reaction plate for individual requirements.

8603 - 8604

TORQUE MULTIPLIER DREMOPLUS 1700-47500 N·m / 1250-35000 lbf·ft

- ✔ Guaranteed accuracy: Better than +/- 4% tolerance
- ✔ For use with a torque wrench
- ✔ Model-dependent reaction plate/reaction arm
- ✔ Torque multiplication ratios: 5:1, 25:1

GEDORE SCREWDRIVERS

A GOOD TURN

GEDORE screwdrivers feature our 3-component handle for the ideal combination of comfort, toughness, and torque transfer.

1. The soft section in the rear part of the handle lies especially well in the hand. It lets you apply your full strength to the tool, without overtiring on long jobs.
2. A tough core picks up the torque and transfers it to the shaft without loss.
3. The front section is hard, for faster turning of non-resisting screws.

The blade is chrome vanadium steel, fully hardened over its entire length for maximum safety. The hardened tip holds its profile for long-term dependable service.

2150

3C-SCREWDRIVER for slotted head screws

- ✓ To DIN ISO 2380-2, blade tip DIN ISO 2380-1 Form A
- ✓ Blade of vanadium plus steel
- ✓ 3-component handle with hanging hole

GEDORE WRENCHES

TIGHTER TOLERANCES

GEDORE wrenches are produced to tighter tolerances than most – that means they grip bolt heads better, with less play and less damage to the bolt head. This also transfers torque more effectively for easier working.

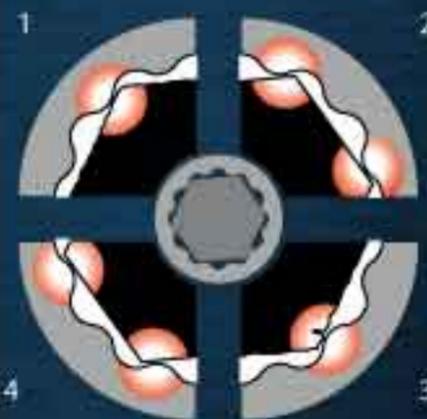

GEDORE tolerance – better grip

Standard tolerance – looser fit

Our UNIT DRIVE box wrench inside profile protects bolt heads and gives a better grip even on damaged heads:

- The wave shape increases the grip area - even with bolts whose dimensions are outside spec.
- Force is applied only to the flats of the bolt heads. This prevents deformation.
- The greater contact surface permits an even distribution of force.
- The wave shape lets you turn even damaged bolt heads.

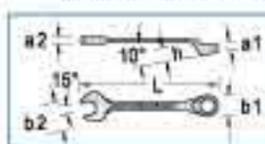

COMBINATION WRENCHES

1 B

- COMBINATION WRENCH** with same size each end
- To DIN 3113 Form B, ISO 3318, ISO 7738 (metric sizes only)
 - GEDORE vanadium steel 31CrV3, chrome-plated
 - With same size each end, box 10° offset
 - Sizes 5 and 5.5 with hexagon box
 - * not standardized

GEDORE PLIERS

PLIERS WITH A DIFFERENCE

All pliers are not equal – there are definite differences in performance. GEDORE pliers are designed for heavy-duty industrial use. They feature:

1. Additional induction hardening of the jaw, for exceptional cutting performance that lasts.
2. Ergonomic grip shape for very efficient force transfer.
3. 2-component grip for comfort with control, minimizing fatigue over prolonged use.
4. Trapezoidal finger guard for maximum safety
5. Hot-forged, hardened and tempered steel

Good pliers make work go better, and Gedore pliers are some of the best you can get.

GEDORE INSULATED TOOLS

SAFETY FIRST

There is no substitute for safety around electricity. For an extra margin of safety, GEDORE offers the "VDE" series of insulated tools.

These tools feature our "Checktool" two-layer insulation, red on the outside and yellow on the inside. This lets you instantly see if the insulation is worn – if you can see yellow, the tool is no longer insulated to spec and should not be used around electricity.

GEDORE Insulated tools offer protection up to 1000 V AC and 1500 V DC current per the EN 60900 / IEC 60900:2004 standards. They give you the additional safety you need for electrical work.

"Checktool" two-layer insulation gives instant visual check of insulation soundness

Safety Notes

- Work on electrically live equipment must be done only by trained electricians!
- Check the insulation for damage before doing any work.
- Damaged tools must not be used!
- Always comply with employer, utility, and facility rules.
- Tools must not be combined unless they are designed to be securely joined together.

INSULATED SCREWDRIVERS

GEDORE PULLERS

TWIST & PULL – QUICK & EASY

With our unique TWIST & PULL pullers, you don't need to adjust the jaws – just center the tip of the forcing screw, twist the head, and the jaws go into position automatically.

Place it, twist it, pull it.

All GEDORE pullers are built tough for professional use. Our T-shape jaws give excellent force transfer, and interchangeable forcing screw tips permit flexible use.

PULLERS

PULLERS

1.04

UNIVERSAL PULLER 2-arm

- ▶ Cross-beam with reinforcement
- ▶ Scale for uniform adjustment of the puller legs. Allows centered pulling with optimized application of force, even when extremely high pulling forces are required
- ▶ Cantilever design of legs enhances pulling power
- ▶ Quick-action legs
- ▶ Forcing screw with replaceable ball and tip
- ▶ Forcing screw thermo-chemically hardened
- ▶ Upgradeable with hydraulic forcing screw

PULLER TWIST+PULL 3-arm pattern, with rotating adjustment

- ✔ The high-precision head allows fast and exact use
- ✔ The legs open by simple rotation and automatically close around the workpiece
- ✔ No more time-consuming setting-up and readjusting of the legs
- ✔ High-quality steel and thermo-chemical treatment for extreme durability of forcing screw and legs
- ✔ Ball or tip can easily be exchanged

1.92 EXTRACTOR

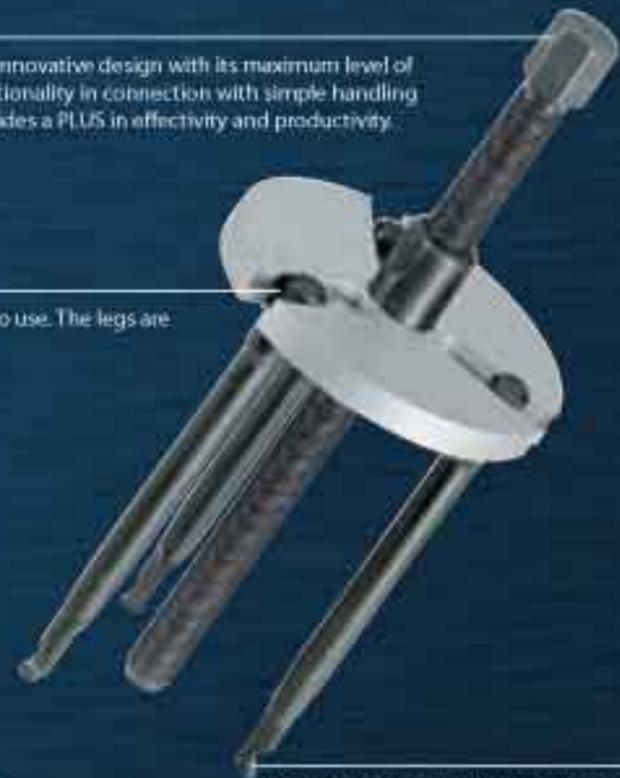

Better solutions through innovative and precision technology

Set 1.92/12 covers over 40 standard ball bearings up to 63T1

1 The innovative design with its maximum level of functionality in connection with simple handling provides a PLUS in effectivity and productivity.

2 The top plate is easy to use. The legs are fixed in the slot.

3 The self-locking system guarantees 100% force transmission and the maximum safety during withdrawal.

Working principle

1.92

BALL BEARING EXTRACTOR PLUS

- Due to its great degree of functionality combined with the simplified handling, this novel design makes a PLUS in effectiveness and productivity possible
- This tool is easy to use: The legs are fixed in the slot
- The self-locking arrangement means that the force applied is fully utilized. Secure at all times against slipping off - with straight pulling force for precise working
- Suitable for more than 40 standard ball bearings up to 6311
- * with supporting ring 6309
- ** with supporting ring 6310
- *** with supporting ring 6311
